

# iServer TOGAF® 9.1 Accelerator

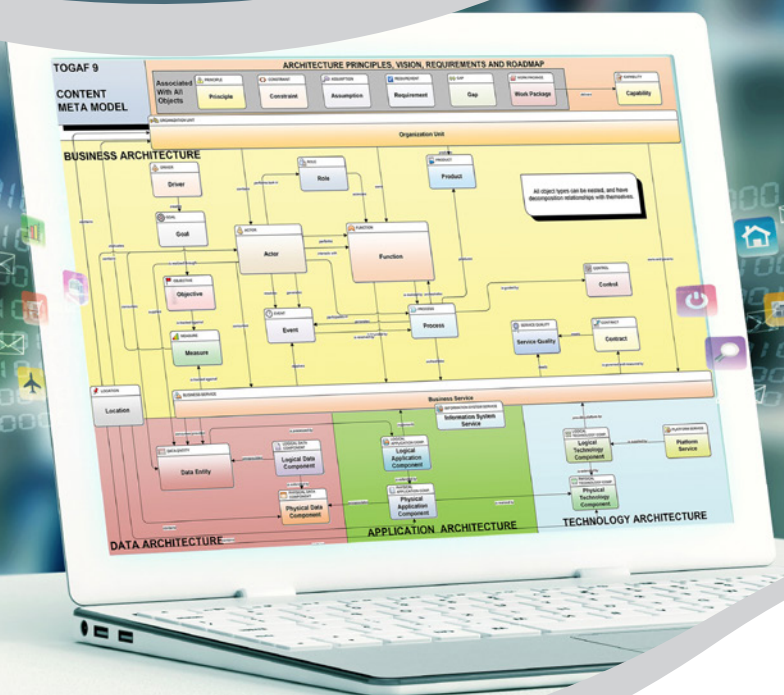

TOGAF® 9 Tool

*The TOGAF 9.1 Accelerator from Orbus Software is a comprehensive toolkit that will enable your organization to align with the Open Group's de facto framework and kick-start your EA initiative.*

Consisting of a preconfigured iServer repository, this accelerator is designed to give you a very quick start with TOGAF 9.1. It is built around the ADM, containing a complete set of TOGAF deliverables and artifact types aligned to the appropriate phases of the ADM. The accelerator also fully supports the TOGAF 9.1 meta-model, including all object types, relationship types, and the full set of meta-data definitions, allowing you to monitor data against a time horizon. This is supported by full versioning, ensuring integrity of enterprise architecture content.

As a part of the iServer collaborative platform, the TOGAF 9.1 Accelerator works in the familiar environment of Microsoft Visio and Office. The templates and viewpoints provided include TOGAF 9 diagram templates in Visio format, covering each of the architecture domains and phases of the ADM, as well as Microsoft Word templates for all TOGAF 9 deliverables and documents. It can also work in combination with our ArchiMate® 2.1 Accelerator, swapping the TOGAF 9 meta-model, notation and viewpoints for the ArchiMate equivalents.
